

Safe deposit lockers BF4

Standard width

Robur has manufactured and installed several million safe deposit lockers around the world. BF4 is manufactured in our factory in Sweden with the highest possible safety and the lockers come with a timeless design.

The lockers are manufactured in natural anodized aluminium which gives a timeless design. The cover plates, ceiling and plinths are manufactured in metal and painted in graphite grey. The body is in aluzinc-coated metal.

Available with both mechanical **BC** and electronical **EBC** locking system:

- Mechanical **BC**: double locking system where the customer operates the individual lock and the guardian operates the control lock.
- Electronical **EBC**: double locking system where the customer operates the individual lock and the control lock is operated electronically.

Robur Safe offers an automated safe deposit system detailed in a separate leaflet.

In both systems **EBC** and **BC**, only the customer with the personal key can operate and have access to the locker.

The columns have three different heights: 1830, 2030 and 2230 mm. Standard locker heights are 50, 75, 125, 175 and 300 mm. Each locker has an inner container in cardboard. The inner containers can be ordered in metal on special order.

The lockers can be combined as desired within the free space for lockers between ceiling and plinth with a module height of 25 mm. On the following pages, our standard lockers combinations are described and developed according to the market's requirements.

Burglary protection certified by SBSC according to norm SSF 1048-2.

1830

Total height per column: 1830 mm including plinth H37 mm; Total height for lockers: 1725 mm; Locker width: 320 mm;
Locker depth: 490 mm; Approximate weight per column: 90 kg
